Python version selection (Dec. 2010) –

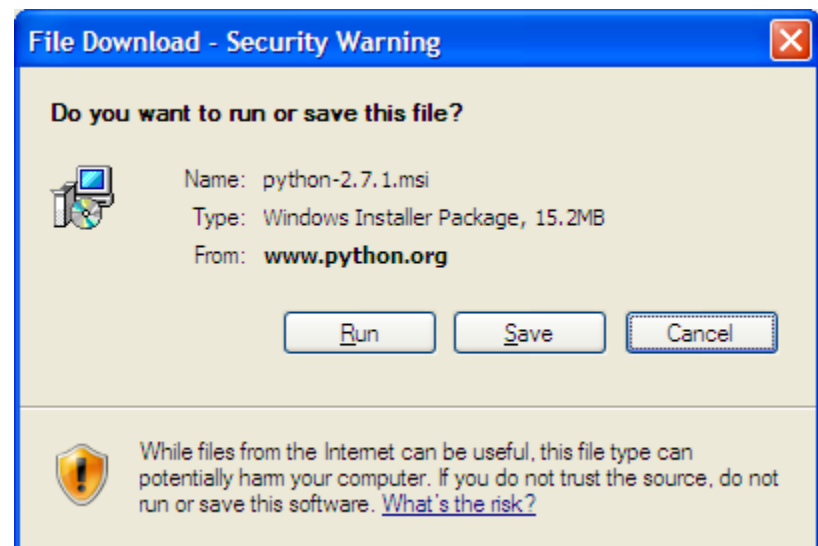

<http://www.python.org/download/>

- Production versions of Python include: [Python 2.7.1](#) and [Python 3.1.3](#).
- For learning Python, start with either version since these are deemed stable production releases.
 - If you are uncertain which version is a better fit to your needs, begin with Python 2.7 since at this time, more existing third party software is compatible with Python 2 than Python 3.
- For the MD5 checksums and OpenPGP signatures, look at the [detailed Python 2.7.1](#) page:
- [Python 2.7.1 Windows installer](#) (Windows binary -- does not include source)
- [Python 2.7.1 Windows X86-64 installer](#) (Windows AMD64 / Intel 64 / X86-64 binary [\[1\]](#) -- does not include source)
- [Python 2.7.1 compressed source tarball](#) (for Linux, Unix or OS X)
- [Python 2.7.1 bziped source tarball](#) (for Linux, Unix or OS X, more compressed).

Installing Python –

<http://www.python.org/download/>

- 64 bit installation example –
 - Windows AMD64 / Intel 64 / X86-64 binary
- 32 bit (or 16 bit?) installation example –
 - Windows binary

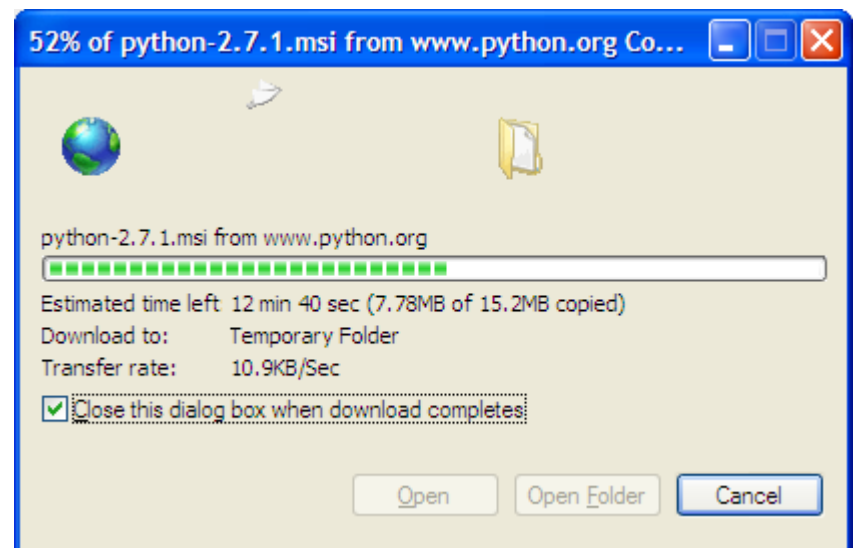

Installing Python –

- 64 bit installation example:
 - Note transfer rate and estimated time left!

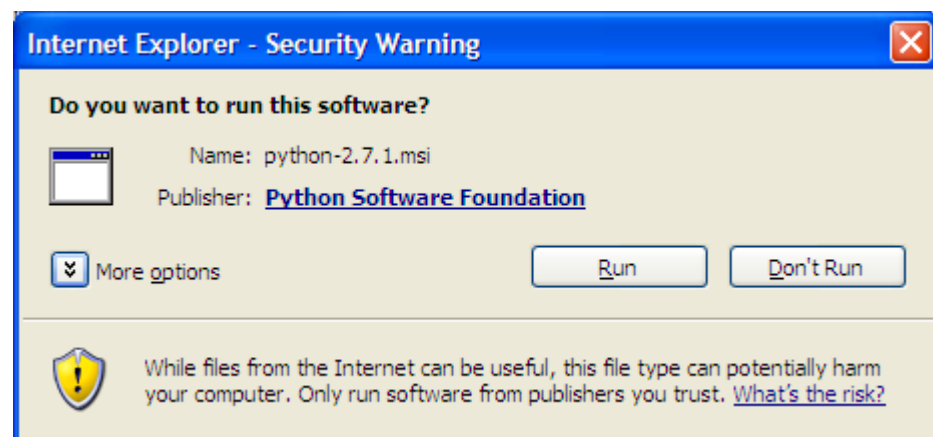

- 32 bit installation example:
 - Note transfer rate and estimated time left!

Installing Python –

- 64 bit installation example:
 - Select “Run” or “More options”

- 32 bit installation example:
 - Select “Run” or “More options”

Installing Python –

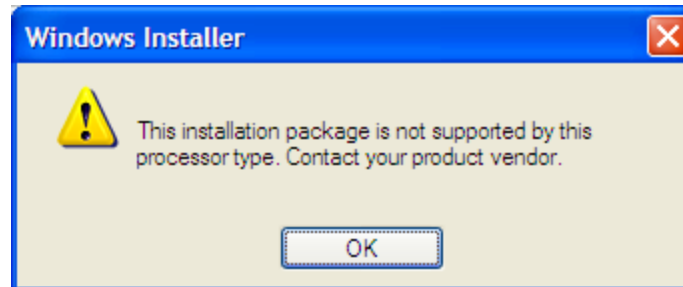

- 64 bit installation example:
 - Select “Run” if you want to install Python.

- 32 bit installation example:
 - Select “Run” if you want to install Python.

Example – failed installation

- Trying to install the 64-bit version of Python onto a computer with a 32-bit microprocessor will fail:
 - AFTER the lengthy file download, this warning will popup –

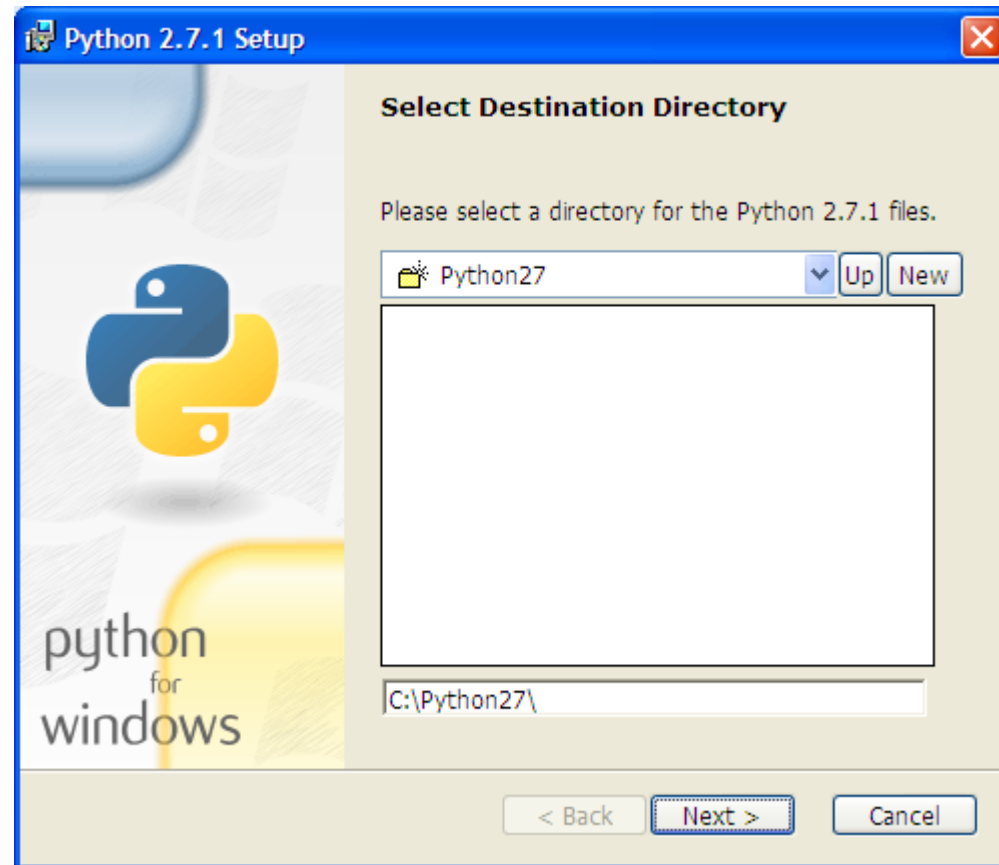

Python 2.7.1 Setup

- Select whether to install Python for all, or for one, computer user.

Python 2.7.1 Setup – Directory

- Select a destination directory.

Python 2.7.1 Setup – Customize ...

- Select the way you want features to be installed.
 - Note space requirements!
- Tip – after installation, navigate to folders to view files.

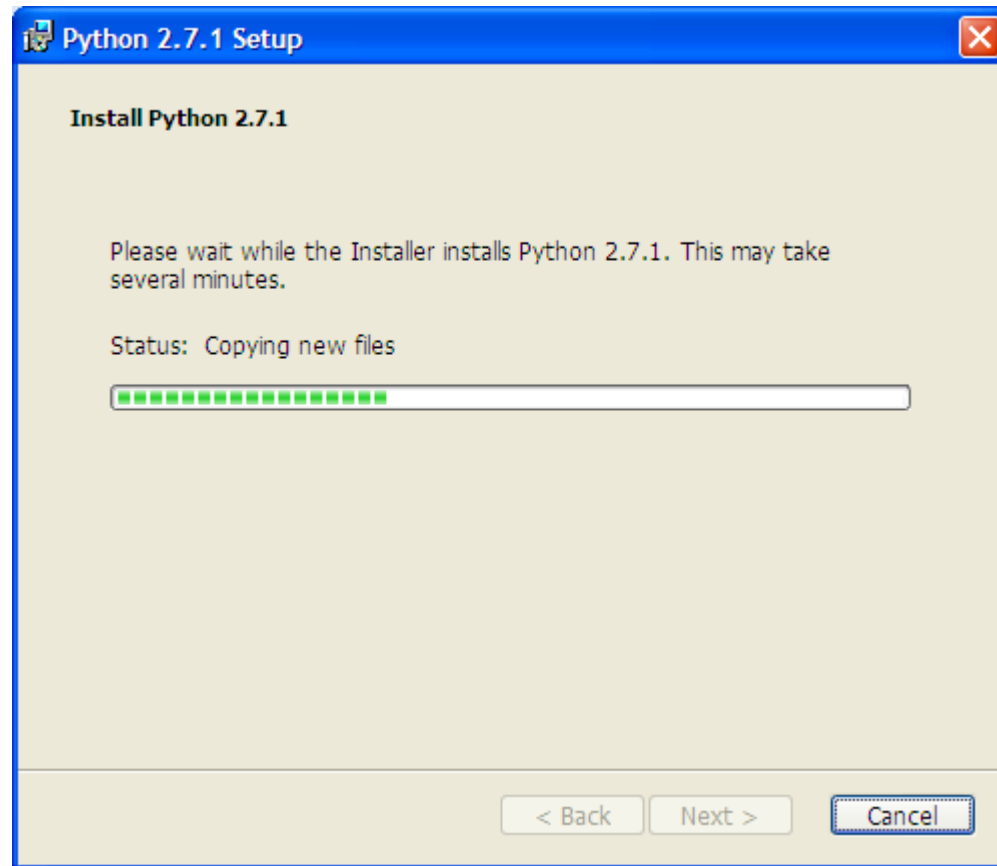

Python 2.7.1 Setup – Python Installer

- The automated Python Installer indicates:
 - Status
 - Progress

Python 2.7.1 Setup – Python Installer (Example)

- The automated Python Installer indicates:
 - Status: Copying new files
 - Progress

Python 2.7.1 Setup – Completing the Python 2.7.1 Installer

- Python installed for Windows instead of DOS.
- Click “Finish”
- “THE END”
 - What’s next?
 - Is a next training module available?

A later module is on: “Python 2.7.1 – Documentation, Startup, and Math”

- Navigate to Python and select: **“Python Manuals”**
- For possible future use, please notice Python’s removal feature:
